

The Raptor Mulcher's unique design does what every mulching blade should do, it keeps the clippings in front of the cutting edge longer. The Raptor Mulcher's teeth redirect the air flow back towards the centre hole of the blade, allowing the cutting edge to continually recut the grass clippings. The longer the grass clippings remain in front of the cutting edge the more often they are re-cut, reducing the final size of clippings.

The environmentally friendliness of the Raptor Mulcher eliminates the need for bagging. The deposited lawn clippings are cut three or four times by secondary teeth, allowing them to fall through the cut grass leaving a smooth even finish. However, if a particular job calls for bagging the Raptor Mulcher will reduce clippings by 50%, and still leave the lawn looking 100% bagged.

Features

Raptor Mulcher teeth cut clippings 3 to 4 times.

Raptor Mulcher teeth reduce drag.

In Sandy conditions sand passes through.

Produced from high carbon steel.

Raptor Mulcher teeth redirect clippings up & to the centre.

Benefits

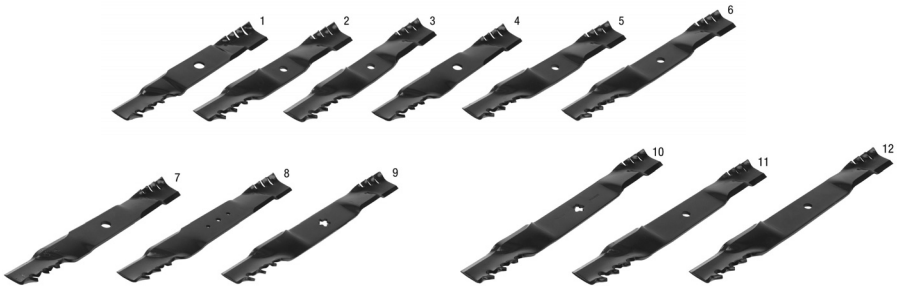

When mulching, clippings fall easily through the grass.

More horsepower available for cutting.

Dramatically reduces engine lugging.

Longer blade life and longer stay-sharp of cutting edge.

Stays sharp and wears longer.
